Summary — Experienced **DevOps Engineer** with 8+ years of expertise in cloud and data center automation, deployment, and management. Skilled in CI/CD, Infrastructure as Code (IaC), and DevSecOps, with a focus on optimizing performance, scalability, and security. Adept at streamlining workflows, automating processes, and fostering collaboration between development and operations teams to drive efficient and seamless software delivery.

Skills

- **Domain Expertise:** Banking, Insurance
- **Operating Systems:** Linux
- **Languages & Scripting:** Bash, Groovy, Python, YAML
- **Version Control:** GitHub, GitLab, BitBucket, IBM Rational Team Concert (RTC)
- **Bug Tracking & Agile Tools:** JIRA, ALM, ServiceNow, Confluence
- **CI Tools:** Jenkins, TeamCity, GitHub Actions
- **Configuration Management & IaC:** Ansible, Terraform
- **Monitoring Tools:** Splunk, AppDynamics, Kibana, Prometheus, Grafana
- **Containerization & Orchestration:** Docker, Kubernetes, OpenShift, Podman, Helm
- **Cloud Platforms:** Amazon Web Services (AWS), IBM Cloud
- **Build/Deployment Tools:** Maven, Gradle, IBM Udeploy, ArgoCD
- **Database Management:** Flyway (Database migrations), Delphix (Data masking and virtualization), MySQL
- **DevSecOps:** SonarQube, Nexus IQ, Fortify SSC, BlackDuck, Archer

Experience

IBM

DevOps Engineer

Dec 2023 – Present

Kochi, India

Product: IBM Db2 Database Analytics Accelerator

- Worked as part of the DevOps squad responsible for designing, implementing, and maintaining a seamless DevOps toolchain for **IBM Db2 Analytics Accelerator for z/OS**, focusing on automation, integration, and scalability for data and AI workloads.
- Designed and deployed a multi-architecture **OpenShift** environment on **s390x LPAR** using **KVM virtualization**, and on bare-metal **IBM Power (ppc64le)** and **x86** systems via **PXE boot**, enabling a scalable hybrid infrastructure.
- Worked on automating OS upgrades on 50+ **IBM Power** and **x86** machines using **Ansible**, reducing manual workload by **60%**.
- Migrated **IBM Cloud Private (ICP)** **Kubernetes** workloads to **OpenShift**, integrating clusters as dynamic **Jenkins agents** to support high-load product builds.
- Migrated container image repositories from **JFrog Artifactory** to **IBM Cloud Container Registry (ICCR)** across all product pipelines, improving integration, security, and deployment reliability within IBM Cloud.
- Optimized **cloud costs** in **ICCR** by reducing container image pull traffic from 15TB to 5TB, achieved through image build optimizations and the implementation of image registry caching, resulting in significant cost savings.
- Implemented a custom **Podman builder** as a secure alternative to **Docker-in-Docker (DIND)** in CI pipelines, integrating with **Jenkins JNLP** agents to enable rootless container builds and improve build isolation.

LTIMindtree

Specialist Cloud Engineering

May 2021 – Nov 2023

Pune, India

Client: Citibank

- DevOps Specialist for the global team of **Realtime Credit Services** at **Citibank**, responsible for designing, implementing, and managing cloud environments, ensuring seamless integration with containerized applications and high-availability microservices for real-time credit processing.
- Integrated **Udeploy** with **ServiceNow** to automate the **One-Touch deployment** strategy, streamlining application deployment to **OpenShift** clusters with end-to-end orchestration and approval workflows.
- Implemented **Docs as Code** with **Docsify**, automating feature documentation updates through the CI/CD pipeline, aiding end users in tracking application updates.
- Led a staged transition of monolithic applications from on-premises to **containerized environments** using **Docker**, **OpenShift**, and **Helm**, incorporating automation with **Jenkins** pipelines and security scans via **BlackDuck** and **Archer** for DevSecOps compliance.
- Automated **Couchbase** log backups to **AWS S3**, implementing lifecycle policies and encryption to ensure compliance and optimize storage costs.
- Implemented cloud cost optimization logic using **AWS Lambda**, automating analysis and actions to reduce resource usage.
- Automated infrastructure provisioning using **Terraform**, including VPCs, subnets, EC2 instances, IAM roles, and security groups to support scalable and secure application deployments on **AWS**.

Client: Income Tax India E-filing, GOSI (General Organization for Social Insurance)

- Worked as part of the **OPS team** on the development and management of the **Income Tax e-filing platform** for **India**, streamlining the submission, processing, and validation of income tax returns online.
- Implemented **DevOps** methodology, transitioning from **Waterfall** to automated CI/CD processes for a large-scale insurance project.
- Automated end-to-end **database deployment** for an insurance application using **Flyway** for version-controlled schema migrations, and built **CI/CD** pipelines with **Jenkins**, **Flyway**, and **Delphix** for synchronized database and application releases.
- Utilized **Jenkins Shared Libraries** to standardize and manage CI/CD pipelines across multiple projects within the organization, improving maintainability and reducing duplication.
- Set up end-to-end deployment automation for **Java**, **OSB (Oracle Service Bus)**, and **ODM (Oracle Decision Manager)** applications, streamlining build, test, and release processes.
- Integrated **DevSecOps** tools including **Fortify**, **NexusIQ**, and **SonarQube** into the CI/CD pipeline to secure software, preventing security breaches and addressing vulnerabilities early in the development lifecycle.
- Managed and optimized **job workflows** using **Autosys**, automating the scheduling and execution of batch jobs, and integrated with **Udeploy** for seamless deployment automation, enhancing CI/CD pipeline efficiency and system reliability in a DevOps-driven environment.
- Optimized application performance and enhanced service visibility using **AppDynamics** for real-time monitoring and troubleshooting.

Education

Master of Computer Applications (MCA)

Sastra Deemed University

2017 – 2020

Thanjavur, India

Bachelor of Computer Applications (BCA)

Mahatma Gandhi University

2013 – 2016

Kottayam, India

Certifications and Professional Training

- IBM Cloud Essentials [View Credential]
- Edureka DevOps Training [View Credential]
- Containers & Kubernetes Essentials [View Credential]

Career Achievements

IBM Growth Award 2024

- Spearheaded automation and optimization in large-scale system migrations, achieving a significant reduction in downtime and enhancing operational efficiency.

TCS Innovista Program Award (2019-2020)

- Designed and implemented innovative database CI/CD pipeline solutions, streamlining deployment automation and transforming database integration workflows.
